

The Natural Path

BLOOD OZONE THERAPY

EBOO FULL SPECTRUM

(Extracorporeal Blood Oxygenation and Ozonation with full spectrum light therapy)

EBOO is considered the world's most advanced medical ozone therapy available today! EBOO incorporates the healing properties of high dose blood ozone (autohemotherapy) at a low concentration (but a high dose) with full spectrum light therapy for a systemic therapeutic treatment option. Together, ozone and light therapy decrease inflammation, increase energy production, and balance the immune system. During a full treatment, 2000ml of blood are treated with 150,000mcg of ozone. This treatment requires dual IV access. Blood is drawn out of 1 IV, mixes with ozone in the diffuser filter, passes through the full spectrum light, and reinfuses into your body through the 2nd IV. This is a closed-loop system and all

SPECTRUM LIGHT.

happens simultaneously. The treatment time is approximately 90mins. **It is important to come to your appointment well hydrated and having eaten a high protein and nutritious meal within 2-3 hours of your treatment session.** EBOO treatment results are deepened when accompanied with IV nutrients and antioxidant treatment regimen. EBOO treatment results are optimized when coupled with a healthy and clean diet, following your specific treatment plan, being adequately hydrated, getting good rest, maintaining open detox pathways, and staying in motion.

BENEFITS OF EBOO

Immune, energy, anti-inflammatory

EBOO has been shown to provide results in managing a variety of conditions, these include-

- Autoimmune: Rheumatoid Arthritis, celiac disease, Hashimoto's

WHAT IS OZONE?

Ozone (O₃) is an energized molecule containing 3 oxygen atoms. The third oxygen atom of ozone is easily reactive and ready to bind to other molecules. Using ozone for medical treatment is called autohemotherapy. Once in the body, ozone initiates a mild oxidative stress reaction which increases the body's own antioxidant buffering system. Thus enabling the body's ability to withstand oxidative stresses. This stimulates various therapeutic biological functions and initiates the body's own innate healing process by decreasing inflammation, balancing the immune system, and increasing mitochondria function.

- Cancer *ozone does not attack the cancer; ozone is for your body to heal and fight*
- Cardiovascular – ischemic diseases, coronary heart disease, atherosclerosis, stroke, peripheral vascular disease
- Chronic fatigue
- Depression and anxiety
- Gastrointestinal – colitis, Crohn's disease, irritable bowel syndrome, leaky gut
- Infection – bacterial, viral, fungal, parasitic, candida overgrowth, toxin overload
- Metabolic dysfunction – hormone imbalance, glucose balance, diabetic mellitus
- Neurological – dementia, Parkinson's, Multiple Sclerosis, cognitive function decline, "brain fog"
- Pain and fibromyalgia
- Pulmonary – asthma and COPD

Are there any risks associated with EBOO?

For best results, do a complete health screen with Dr. Raish to decide if this is the right therapy for you and to ensure you do not have any contraindications. Up to date lab work and providing a full medication/supplement list can be beneficial to ensure the ozone therapy will not exacerbate any underlying health concerns. Heparin, a short acting anticoagulant, is administered during this treatment. **If you have any adverse reactions to heparin, have a coagulation or bleeding disorder, or have a deficiency in the G6PD enzyme please share with Dr. Raish or one of his nurses right away.** This treatment is not recommended if you have uncontrolled thyroid disorders or uncontrolled blood glucose concerns. After the treatment, patients may experience a "Herxheimer reaction" which includes general feelings of unwell, fatigue, and chills. This signifies a natural healing process wherein your body is ridding itself of toxins and dead cells. For optimal results hydrate, move, rest, and intake adequate clean nutrition to give your body what it needs to heal itself before and after your EBOO treatment.
